ECA Overview

Since 1993, ECA's partners have been supporting innovating training and education programs in partnership with allied healthcare training, community colleges, universities, career colleges, workforce agencies, high schools and other education providers nationwide. Beginning with our flagship healthcare courses, and career track courses offering eLearning solutions to over 300 partners operating in 40 states. Now ECA further grows our catalog to support workforce education in multiple disciplines.

Today's workforce is changing and growing every day and we understand how difficult it can be to keep up. Our goal is to ensure our partners' clients successfully complete ECA courses and gain the necessary skills and fundamental knowledge to secure employment opportunities in growing, high-demand fields. New

requirements for professionals, increasing demands on existing roles and the constant development of new specialties not only requires students to gain more skills than ever before, but also demands that current professionals continue to acquire the most up-to-date understanding of new technologies.

In late 2011, ECA's partners completed a 2-year effort to develop online E-learning offerings

in several of our more popular healthcare courses. In partnership with Pearson Education and eCollege, ECA developed our new Health online E-learning offerings.

These Health offerings are truly the industries best and include online student labs and exercises, engaging assignments, instructor discussion threads, and other student support services.

Overview continued

Although the US economy remains sluggish and the overall job market has not improved, the demand for healthcare staff and professionals is growing at a staggering rate. These factors have created enormous job opportunities for individuals trained in leading healthcare professions. Available to both working adults interested in a new career and current healthcare professionals, these exciting programs will help students prepare for the numerous jobs available to healthcare staff and professionals!

Our extensive catalog and unmatched quality coupled with our unparalleled client- support set ECA apart in eLearning. We understand how important it is for you to meet the needs of your community by arming tomorrow's workforce with the training and certification they'll need for years to come and we look forward to helping you achieve these goals

Partnership Details

"Turn-Key Solutions"

ECA provides a turn-key solution allowing partners to offer new or additional allied health programs in demand. With an ECA partnership you will find no hidden cost, commitment, or investment. An ECA partnership includes the following responsibilities – all of which are subject to our partners' approval:

ECA Provides:

- Coordination of National Certification Exams
- A Secure Student Portal Website
- Clinical Externship Support for Students (if applicable)
- Career Services and Support (if required)

Other highlights include:

- Creative Delivery Solutions -- E-learning offerings with a state of the art delivery system. Programs are available to the student 24/7.
- National Certification -- Students, employers, and workforce funding agencies are demanding national certification to validate competencies and acquired skills.
 - Most of these offerings prepare students to take national or state certification exams. ECA works carefully with our partners, students, instructor faculty, and certification organizations to guide students through the certification process.
- Employment -- Students who successfully complete these programs are highly employable in the career field. Other services can be integrated to ensure that students that enroll in these programs have the skills necessary to compete for jobs.
- ECA's Customer Service -- ECA works carefully with our partners to ensure that the goals and objectives of these programs are met. ECA encourages any institution who is considering a partnership with ECA to talk to one of our partners nationwide.

Healthcare Academy Course Details

Pharmacy Technician Program

This comprehensive program will prepare students to work as a pharmacy technician in a retail or other pharmacy setting and to take the Pharmacy Technician Certification Board's PTCB exam. Course content includes: pharmacy medical terminology, the history of pharmacy, the pharmacy practice in multiple environments, pharmacy calculations and measurements, reading and interpreting prescriptions and defining drugs by generic and brand names. Through classroom lecture and hands-on labs, students will review dosage calculations, drug classifications, the "top 200 drugs",

I.V. flow rates, sterile compounding, dose conversions, aseptic technique, the handling of sterile products, total parental nutrition (TPN), dispensing of prescriptions, inventory control and billing, and

reimbursement.

Clinical Medical Assistant Program

This program is intended for students who want to prepare for an exciting, challenging, and rewarding career in healthcare. This program will train students to assist physicians by performing functions related to the clinical responsibilities of a medical office. Instruction includes among other things preparing patients for examination and treatment, routine laboratory procedures, diagnostic testing, technical aspects of phlebotomy, and the 12 lead EKG and the cardiac life cycle. Students will review important topics including phlebotomy, pharmacology, the proper use and administration of medications, taking and documenting vital signs, cardiology including proper EKG lead placements, a professional workplace behavior, ethics and the legal aspects of healthcare. This program includes classroom lecture and hands on labs and a clinical externship opportunity at a local healthcare provider.

Physician's Office Assistant Professional

This course prepares students to function effectively in many of the administrative and clerical positions in the healthcare industry. Medical Administrative Assistants, Medical Secretary, and Medical Records Clerks are all positions in great demand. This program covers important background information on the medical assisting profession and interpersonal skills, medical ethics and law, medical terminology, basics of insurance billing and coding, telephone techniques, scheduling appointments, medical records management and management of practice finances. This program is intended to provide students with a well-rounded introduction to medical administration so that they can gain the necessary skills required to obtain an administrative medical assistant position.

Dental Assisting Program

The Dental Assisting Program prepares students for entry-level positions in one of the fastest growing healthcare positions – Dental Assisting. The purpose of this course is to familiarize the student with all areas of pre-clinical dental assisting and provide training in the professional skills required to function as an assistant in the dental practice. This course covers the following key areas and topics – Administrative Aspects include: the history of dentistry and dental assisting; introduction to the dental office; the legal aspects of dentistry; policies and guidelines. Clinical Aspects include: introduction to oral anatomy; dental operatory; dental equipment, introduction to tooth structure; primary and permanent teeth; the oral cavity and related structures; proper patient positioning; dental hand-pieces; sterilization; and other areas. In addition to entry-level administrative jobs, this course is ideal for students interested in pursuing a future formal Dental Hygienist program.

Health Information Technology (HIT)

This program will train aspiring healthcare and information technology professionals to be part of the country's emerging health IT industry. Elements of the program include: a comprehensive overview of human body systems, health information terminology; communication in healthcare, privacy laws and confidentiality, professional and ethical issues, customer service and the role of HIPPA in the digital electronic health record (EHRs). Students will review the requirements of and effective IT environment including: basic computing, an overview of computer architecture and data organization, programming languages, networking, hardware components, software applications, the HITECH Act and the concept of "meaningful use" of EHRs. Additionally, students will review the fundamentals of selecting, installing and maintaining EHRs. Students will document system interfaces and integration requirements and learn to backup and restore databases, applications, and operating systems. This course will include approaches to assess, select and configure EHRs; how to document processes and conduct workflow analysis; how to explain the functions of all layers of the ISO OSI models; describe data standards required for the interoperable exchange of healthcare data; describe components of health IT standards (including HL7 and TC215) for health information exchange; and review enterprise architecture models. Students will gain an understanding of project management principles, tools and techniques with practical applications for the HIT professional. Note: Extensive student exercises and hands-on labs are also required.

Nationally Recognized HIT Certification Exams:

Students who complete this program would be qualified to sit for the following three (3) national HIT-Pro certification exams:

1) Technical/Software Support Staff competency exam; 2) Practice Workflow and Information Management Redesign Specialist competency exam and 3) the Implementation Support Specialist competency exams. HIT Pro are Workforce Development program exams sponsored by the US Department of Health and Human Services.

Medical Billing and Coding Program

This combined billing and coding course offers the skills needed to solve insurance billing problems, how to manually file claims (using the CPT and ICD-9 manual), complete common insurance forms, trace delinquent claims, appeal denied claims, and use generic forms to streamline billing procedures. The course covers the following areas: CPT (Introduction, Guidelines, Evaluation and Management), specialty fields (such as surgery, radiology and laboratory), ICD-9 (Introduction and Guidelines), and basic claims processes for medical insurance and third party reimbursements. Students will learn how to find the service and codes using manuals (CPT, ICD-9 and HCPCS).

ICD-10 - Medical Coding Course

Effective October 2014, the US Department of Health and Human Services (HHS) will require that the standard ICD-9 code sets, which are used in medical billing and coding to report health care diagnoses and procedures, be replaced by ICD-10. This move from ICD-9 to ICD-10 will have a significant impact on healthcare providers and the process for which they receive reimbursement. This program will include a detailed review of both ICD-10 (diagnostic coding) and ICD-10-PCS (inpatient procedural coding system). Additional program elements include: differences between ICD-9 and ICD-10; federal regulation/compliance; using the ICD-10 Manual; how and when to use the ICD-10-PCS; issues surrounding the implementation of ICD-10; documentation challenges; analyzing electronic coding tools; coding from chart notes; coding from operative reports; and detailed hands on coding exercises and case studies using ICD-

10. This course is ideal for experienced students interested in a career in medical coding and for current coding professionals looking for and update and review of the issues and challenges they will face with the upcoming

ICD-10 adoption.

EKG Technician Program

This comprehensive EKG Technician program prepares students to function as EKG Technicians and to take the ASPT – Electrocardiograph (EKG) Technician exam and other National Certification Exams. This course will include important practice and background information on anatomy and physiology of the heart, medical disease processes, medical terminology, medical ethics, and legal aspects of patient contact, electrocardiography, and stress testing. Additionally, students will practice with EKG equipment and perform hands on labs including introduction to the function and proper use of the EKG machine, the normal anatomy of the chest wall for proper lead placement, 12-lead placement and other clinical practices.

Electronic Health Record Management Program

This Electronic Health Record (EH R) Management program prepares students to understand and use electronic records in a medical information is changing the ways doctors Access health to care for their patients. Doctors now have access to a patient's medical history, surgeries, allergies to medicines, and recent doctor's visits all at the press of a button. This recent technology that intertwines health information from a variety of sources is known as an electronic health record. An electronic health record (EHR) includes computerized lifelong healthcare data from a variety sources where every encounter an individual has with the healthcare system is documented and compiled for quick access. Electronic Health Record professionals are educated in the implementation and management of electronic health information using common electronic data interchange systems such as HL7, CDISC, and DICOM. Students will learn through classroom and computer lab training the necessary components consistent with maintaining the medical, legal, accreditation and regulatory requirements of the electronic health record and database.

Phlebotomy Technician Program

This Phlebotomy Technician Program prepares professionals to collect blood specimens from clients for the purpose of laboratory analysis. Students will become familiar with all aspects related to blood collection and develop comprehensive skills to perform venipunctures completely and safely. Classroom and lab work includes terminology, anatomy and physiology; blood collection procedures; specimen hands-on practice; and training in skills and techniques to perform puncture methods.

Medical Administrative Assistant Program

This course prepares students to function effectively in many of the administrative and clerical positions in the healthcare industry. Medical Administrative Assistants, Medical Secretary, and Medical Records Clerks are all positions in great demand. This program covers important background information on the medical assisting profession and interpersonal skills, medical ethics and law, medical terminology, basics of insurance billing and coding, telephone techniques, scheduling appointments, medical records management and management of practice finances. This program is intended to provide students with a well-rounded introduction to medical administration so that a student can gain the necessary skills required to obtain a medical administrative assistant position in the healthcare field.

Dialysis Technician Program

This Dialysis Technician Program provides students with the knowledge and skills needed to perform the duties required of Dialysis Technicians. Under the supervision of physicians and registered nurses, Dialysis Technicians operate kidney dialysis machines, prepare dialyzer reprocessing and delivery systems as well as maintain and repair equipment. Furthermore, technicians work with patients during dialysis procedures and monitor and record vital signs as well as administer local anesthetics and drugs as needed. Additionally, they may also be involved in the training of patients for at-home dialysis treatment.

Medical Terminology Program

This medical terminology program is a comprehensive guide to identifying, analyzing, and understanding the basic word structure, root words, suffixes, and prefixes. In addition, this program will provide instruction in the organization of the human body and the associated systems, major drug classifications, diagnostic tests and treatment procedures, medical abbreviations and symbols and common medical terms. This program is intended to provide students with a well-rounded introduction to medical terminology enabling a student to better comprehend medical terms

Academic and Science

American History & Government Specialist

The American History & Government Specialist Program This course introduces students to the fundamentals of American government and politics focusing on the historical evolution of government and policies, the major institutions, and the major processes. Throughout the course, students will evaluate the various characteristics unique to American government through the critical lens of history and current international developments with a constant eye toward future limitations or promises still to be met. Offering students an in-depth look at the fascinating developments that make up American History, students will gain a fundamental understanding of the history that has led to a successful nation today, the roots of various difficulties that continue to test the United States and the basic foundations that have endured through history to guide decisions for years to come. Alongside and in-depth look at how American government works, this course delivers a broad survey of American history from New World exploration and settlement through Independence, the Civil War, Reconstruction, Manifest Destiny, the Industrial Revolution, the Great Depression, and two World Wars all colored by the social, political and cultural developments that led to the US as it stands today.

Environmental Specialist

The Environmental Specialist Program For this program, students will take an in-depth look at the functions of all things on planet earth, its atmosphere, composition and structure as well as the inhabitants that occupy it. The program will explore various toxic substances that can affect the delicate balance that results from this complex interconnectivity and understand how just the slightest alteration in one aspect can affect the whole. Further, this program explores the relationship between man and the environment. Students will examine the balance between natural resources and the needs of mankind. Students will further explore the scientific, political, economic, and social implications of environmental science that affect a variety of public policy decisions at multiple levels of government.

Life Sciences Specialist

The Life Sciences Specialist Program Students completing this program will gain a fundamental understanding of the biological principles and the properties of life, considering the structure and function of plants and animals, their relationship to various organisms, to each other and the environment they inhabit. Taking an in-depth look at cell biology principles, reproduction, development and growth, students will begin to understand the mechanics of evolution, inheritance and genetics. Students will learn the various ways for classifying different organisms, animals, and plants, as well as the human body, the characteristics and distinctions between them as well as the way in which all of these organisms contribute to the overall environment. This program also provides an overview of the anatomical structures and physiology of the human body. Each body system is discussed in terms of the major anatomical structures and functions including how each system participates in homeostasis of the body. In addition, the program discusses selected major pathologies, including disease definitions and causes, signs and symptoms, diagnostic procedures, and possible treatments. Finally, the program will present common issues and changes that occur in each body system through the lifespan.

Psychology

The Psychology Program The Psychology Program course takes students through the basic concepts, theories. research methods, and contributions to the understanding of human behavior taking students through the various complexities of human development, the motivations for our thoughts, feelings and behavior as well as the role of sexuality, gender, heredity and genetics as applied to human behavior overall. Students will have the opportunity to analyze various psychological disorders, "normal" behaviors and the basis of the psychology behind learning, memory and experience. Students who complete this course will have firm understanding of the theories and concepts of psychology including the scope of psychology, biological foundations and the brain, sensation, perception, motivation, personality, learning/memory, emotion, states of consciousness, personality theories, cognition, life-span development, and applied psychology.

Public Speaking Expert

The Public Speaking Expert Program the Public Speaking Expert program helps students to set themselves apart from their peers and colleagues with polished, professional presentation skills that will be tapped by superiors for a variety of presentations, from bringing in prospective clients and ultimately close deals. This valuable program provides students with a basic understanding of public speaking and how to prepare and present a variety of speeches. Good public speaking skills are extremely rare and successful students will absolutely be set apart from their colleagues should they master the sills offered in this program. With particular attention paid to Microsoft PowerPoint presentations, this program will ensure students understand how to enhance a presentation through this medium.

Research Specialist

The Research Specialist Program the Research Specialist Program takes students through the fundamentals of qualitative research from gathering data, developing surveys, and recording sources properly to thinking critically about your findings and challenging yourself to draw unexpected conclusions from your efforts. More often, the challenge to research is synthesizing your discoveries into written form – turning a collection of notes into a final expression or argument. This program will show students how to get from start to finish on a research project through proven strategies alongside emerging trends in internet and digital research.

Sociology

The Sociology Program Throughout this program, students will take a look at culture, values, socialization, cooperation, conflict, inequality, deviance, violence, social conflict and control alongside the different social stratifications that make up our existence, our relationships and our everyday lives. The program focuses on globalization, cultural diversity, critical thinking, new technology, and the growing influence of mass media. Students who complete this program will gain a comprehensive understanding of Sociology, its origins, theories, applications and implications. This course explores sociological processes that underlie everyday life.

Successful Student

The Successful Student Program This program provides students with the information and skills they need to succeed in their studies, including setting academic goals, managing time and financial resources to meet those goals, and developing an awareness of how they learn. Students also build thinking, listening, reading, study skills, note-taking, test-taking, and information literacy skills. The program also includes discussions on stress management and career development. Throughout, students will apply critical thinking skills to solve problems and evaluate situations. The skills students learn from this program will be essential to student success not only in the academic context, but will also carry over to any professional undertakings thereafter.

Writing Professional

The Writing Professional Program the Writing Professional program develops written communication skills with an emphasis on understanding the writing process, analyzing readings, and practicing writing for personal and professional applications. Students will have the opportunity to really break down the writing process and see how it is useful in constructing and finally writing their own work. Students will discover various styles and sentence structures that can alter the meaning and impact of their writing and ensure they have the tools necessary to convey the meaning they intend, communicate their thoughts effectively and clearly and ensure their writing is presented professionally in terms of grammar, spelling and other issues that can otherwise inhibit successful writing. Students will learn the various techniques appropriate to different writing purposes as well as the different tones and styles applicable to particular contexts (professional, academic, clinical, etc.) In understanding how other sources can help to solidify a piece of writing, students will gain the skills they need to conduct basic research into external sources, what kinds of sources are best used for particular purposes and how best to incorporate this information into their writing in the most effective way possible.

S

Accounting and Economics

Accounting Math Professional

The Accounting Math Professional Program This program takes students through the fundamentals of algebra and statistics as well as their endless applications. Students will learn to solve multiple types of equations including both linear and quadratic functions and master the skills necessary to solve challenging word problems, including actual scenarios one encounters on the job. Further, this program will ensure students gain the skills necessary to perform complex statistical analysis of selected samples, understand how to choose the most applicable samples for study and draw conclusions from the analysis pulled from various data sets. Students will learn to gather multiple answers to questions posed every day in business using statistical distributions, probabilities, confidence intervals and more! Once able to build applicable statistical models and interpret the data pulled together, these skills will serve students in their careers for years to come. This program presents students with the key concepts of college-level algebra and statistics. Students will be introduced to solving equations and inequalities, functions (including linear, quadratic, polynomial, rational, exponential, and logarithmic). Further, this program will offer students the skills necessary to interpret and critically evaluate statistics commonly used to describe, predict, and evaluate data in an information-driven environment.

Accounting Professional

The Accounting Professional Program Any successful business owner can tell you that proper accounting is one of the most important aspects of their entire organization. Proper accounting is essential to the effective functioning and success of any small business and the leadership teams in these companies depend entirely on their accounting staff to track and report the overall health of the company from day to day, quarter to quarter and year to year. Staff who understanding how to calculate the essential accounting data for a company have the skills to properly advise leadership on the business decisions they need to make. Apart from the CPA who prepares the formal tax filings, the skills students gain from the Accounting and Finance Professional Program will ensure they're prepared for the lead accounting and financial position with any small business or effectively assist on a sophisticated accounting and finance team. The theory and practical skills combined in this Program will ensure students come away with the essentials of accounting, business math and statistics with a fundamental understanding of finance and business law. Students who complete the Accounting Professional Program will have the skills necessary for success in these positions starting from day one on the job!

Economics Professional

The Economics Professional program presents basic concepts necessary to an informed understanding of the economy. Starting with individual consumer behavior and corporate actions, the program moves on to explain both micro- and macroeconomics and the interplay between these 2 perspectives in terms of output, unemployment, inflation, productivity and growth. The effects at the micro level are different to those at the macro level, but sometimes they can also run in parallel and students will study the different ways in which all aspects of the economy are affected. This extensive program Introduction assumes students are new to the study of economics outlining economic theory and moving through analysis of supply and demand, government action, competitive markets and different types of economic markets that present unique challenges. This program encompasses economic principles (both microeconomic and macroeconomic) and problems. The purpose of the program is for students to develop a logical, conceptual, and analytical understanding of economic principles and to deal with problems associated with the allocation of resources, decisions made by consumers, production by firms, and pricing in various market conditions, government actions in markets, measuring aggregate output, economic growth, employment and unemployment, money and banking, and fiscal and monetary policies intended to achieve economic goals.

Business

Business Communication Professional

The Business Communication Professional Program Whether in writing or speaking, effective communication is a must for business managers at all levels as well as those seeking promotion into higher ranks. Students will learn the fundamental strategies behind effective business communication alongside potential barriers that may inhibit these efforts. Students will be introduced to technology that will facilitate their communication efforts, gain insight into effective oral presentations as well as visual aids that can help in these efforts. This program will also ensure students learn to write faster without sacrificing clarity making sure they can avoid common errors, resolve issues effectively and increase credibility overall by communicating exactly what they mean to their audience without all the extraneous. unnecessary material. Participants will also learn effective strategies to revise and fine-tune every kind of business document to convey the exact meaning they intend in the most effective way possible. For those students looking at a career in sales or any client-facing position, the business communication course is a must, but it's also a great tool for anyone getting started in an office environment to have a mastery of these skills.

Business Information Systems Professional

The Business Information Systems Professional program examines the intricacies and uses of information technology from a business enterprise perspective. Students will explore the individual components and of business information technology systems, their interconnectivity, as well as the development of such components based on particular business types. Students will understand how various information systems are useful to enhance productivity and facilitate management practices. This program also introduces the various information and communications technologies available and explains how information systems are used to solve problems and make better business decisions. All of these systems work together to speed and improve traditional business practices and should be used in a way that is beneficial to various decision making processes and strategic business actions. Students will understand the need for workable networking concepts, examine the purpose and need for information systems as they pertain to overall function and security and also learn different applications and design techniques for successful business information systems.

Business Law Specialist

This Business Law Specialist Program is designed to introduce students to all business law concepts from their roots in common law through to elements of American and international law that make up this area of robust jurisprudence. Businesses operate every day under accepted theories of contract and tort law, promoting equitable transactions and ensuring corporate responsibility that advance accepted notions of good business practices. Corporations are also subject to various statutory frameworks that dictate the treatment and conditions of employees, ensure environmental protection and protect consumers from powerful organizations when necessary. Throughout this program, students will explore all of these issues and learn how the law applies to business operations every day. The Business Law Specialist program will provide students with a survey of the principle areas of business law. It will explore the relationship between business and the law with respect to the following topics: torts, crimes, intellectual property, contracts, negotiable instruments, agency, employment, and forms of business organization. Students will also explore the relationship between business and the law with respect to ethics and social responsibility, government regulation, personal property, real property, and international trade. Students will gain a working knowledge of practical rules of law and legal terminology, as well as legal solutions for business-related issues.

Business Management Professional

The Business Management Professional Program Leading a team of colleagues or managing your own staff requires a set of leadership skills that are often few and far between in today's business culture. Understanding the personalities working for you and with you, while also maneuvering to get the most out of the different skill sets and personalities on your staff is essential to effective leadership and productive management. With the Business Management Professional Program, this collection of skills and knowledge will ensure students understand the delicate balance of leadership, motivation, delegation, and authority while fostering an environment of encouragement and teamwork. From business communication and basic supervision to the fundamentals of leadership and project management, this combination of courses ensures students will emerge with the confidence to make the tough decisions managers are faced with every day coupled with a comprehensive understanding of what it takes to be a true leader.

Business Math Specialist

The Business Math Specialist Program This program applies math fundamentals to business applications. Topics include a basic math review, business statistics, profit calculations, payroll, banking, interest calculations, insurance, taxes, and other business topics. Upon completion of this program, students will have a fundamental understanding of how to solve mathematical problems as they pertain to various business transactions. Further, students will also analyze common business problems using mathematical equations and concepts as well as useful business statistics calculations.

Entrepreneurship Specialist

The Entrepreneurship Specialist Program Entrepreneurs are the lifeblood of American business, turning great ideas and services into successful businesses every day. But starting a business and growing it to a successful enterprise requires more than just a good idea - owning your own business requires an adaptive, flexible, and well-rounded skill-set that will ensure you're prepared to navigate through a multitude of business issues. In short, successful entrepreneurs wear every hat in their business - they're effective managers and savvy negotiators all paired with an unmatched work ethic. The Entrepreneurship Specialist Program pulls together all of the education and skills necessary for success in starting your own business or just cultivating that entrepreneurial spirit necessary to start a new division in your current role working for another company. From drafting the initial business plan to financing your vision and managing your staff, the Entrepreneurship Program covers everything successful entrepreneurs require to start, build and grow their next venture.

Finance Professional

The Finance Professional Program Taking students through both theoretical and real-world examples to demonstrate the valuation of assets, this program will help students in various decision-making processes not only in business, but in personal finance as well. Moreover, this program will introduce students to the basics of evaluating corporate financial statements, evaluating certain aspects of a company to determine its overall wealth or health, both of which go to shareholder value - every company's overall mission. The program ensures students have a firm understanding of risk and return, individual and collective financial markets, and the application of capital budgeting tools and learn how to properly evaluate capital structure and dividend policy in a global context. The Finance Professional program provides students with a foundational knowledge of financial management. The program covers key language and terminology, time-value of money, financial markets and securities, financial statements, financial analysis, risk and return, valuation of stocks and bonds, capital budgeting and valuation, cost of capital and capital structure, working capital management, dividend policy, and international finance.
